## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show numbering labels for structural elements as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goodrich (US 5,311,713).

Goodrich discloses a pole protector comprising a cover 15 having a length, a width, first, second sides, first, second edges, thickness 1/16"-1/8", fabricated from flexible plastic or any suitable plastic may be used, being wrapped around column 34, removably fastener means are hook-and-loop disposed at the edges 30 and 32 of the first section 12 and the second section 14. (See figs. 1-2, cols. 2-3).

Goodrich does not disclose expressly and specifically the cover having a thickness of at least  $\frac{1}{2}$ ", the length would be approximately 8' and the width would be approximately 11.5". It would have been obvious to one of ordinary skill in the art at the time the invention was made to optimize the desirable length and width, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art.

### **Conclusion**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Krackeler et al. (US 4,585,607), Walsh (US 5,586,838), Fawley (US 5,924,262), Isley (US 5,218,810), Neuner (US 6,363,681), Ban (US 6,085,484), Carter (US 5,791,391), Erickson (US 5,438,812), Fayle (US 6,176,062), Gillispie et al. (US 6,242,070), Burns (US 5,746,031), Pease (US 3,831,941), JP (4-89970) teach column covering elements.
